February 29, 1960

Betz Laboratories
Gillingham & Worth Streets
Philadelphia 24, Pennsylvania

Attention: Mr. Max Priester

Gentlemen:

Subject: Waste Treatment Plant

We enclose for your inspection and comments our preliminary drawings on a batch treatment system for plant liquid waste. Our print numbers are 36087-Y and 36112-Y through 36115-Y.

We have discussed the internal equipment such as chain belts, agitators, etc. with representatives from Link Belt, Cochrane and Hungerford & Terry Companies. When we receive more information on this equipment we shall adapt it to our layout.

You will also find enclosed our print number 36076-1/2Y. This covers a two-section concrete tank. One side is for continuous blowdown and the other for manual blowdown. We have located this just south of the existing blowdown line on the east side of the Forge Shop. We have connected the overflow into our existing clear water line going to the brook.

Cochrane Corporation is the first to supply us with a bid on an oil removal high pressure condensate plant. I would appreciate your checking their enclosed bid and advising us on it. I shall pass along to you additional bids as they are received.

On February 26, 1960 Mr. Pierney was given a sample of water from our #3 test well located east of the second lagoon. This is our first successful 8" test well. It is capable of pumping approximately 150 G.P.M. We would like your lab to test this sample for detergent and advise if this water can be used in our boiler. We urgently request this information be forwarded to us immediately.

Kindly mark one set of the enclosed prints with your suggestions and return to me.

Yours very truly,

AR200063
